What is Klonopin and Why is it Prescribed?

Klonopin, also known as clonazepam, is a medication commonly used to treat anxiety disorders, seizures, and panic attacks. It belongs to a class of drugs known as benzodiazepines, which work by enhancing the effects of a neurotransmitter in the brain called gamma-aminobutyric acid (GABA). This helps to reduce abnormal electrical activity in the brain, leading to a calming effect on the body.
